July 2012**

## REPORT TITLES

### Ionic Regulation

- Silva, P., Spokes, K.C., Kinne, R. Identification of aquaporin mRNA in the rectal gland of *Squalus acanthias* ..... 1
- Cutler, C.P., Smith, D. Vivo-morpholino knockdown of aquaporin 1 (AQP1) protein expression in American eel (*Anguilla rostrata*) gastrointestinal tract ..... 4
- Stahl, K., Stahl, M., de Jonge, H.R., Forrest, J.N., Jr. ANP, CNP and sildenafil activate CFTR expressed in *Xenopus laevis* oocytes by direct activation of PKA ..... 6
- Jensen, T., Aleksandrov, A.A., Cui, L.Y., Riordan, J.R. Action of “correctors” of human  $\Delta F508$  CFTR on the mutant protein from other species ..... 10
- Jenkins, M., Pfau, D., de Jonge, H.R., Forrest, J.N., Jr. Partial sequence of type 3 phosphodiesterase in the rectal gland of the dogfish shark (*Squalus acanthias*) ..... 12

### Comparative Biochemistry

- Baum, J., Clift, A.N., Conrad, G.W. Importance of perfecting a positive control before testing a new hypothesis: the effect of riboflavin and UVA treatment on the corneal stroma of the spiny dogfish shark (*Squalus acanthias*) ..... 14
- Silva, P., Spokes, K.C., Kinne, R. Molecular identification of glycogen phosphorylase in the rectal gland of *Squalus acanthias* ..... 15
- Kinne, R., Spokes, K.C., Gossart, R., Silva, A., Silva, P. Pharmacological evidence for the transport of glucose through a symporter in the rectal gland of *Squalus acanthias* ..... 17

### Comparative Physiology

- Cai, S.Y., Lionarons, D.A., Smith, V., Filer, D., Boyer, J.L. The cholestatic adult sea lamprey (*Petromyzon marinus*) transports bile salts across the epithelium of the intestine in addition to kidney ..... 19
- Tunnah, L., Deck, C., Alazar, A., Currie, S. Getting fresh: the role of chemical and molecular chaperones in dogfish shark (*Squalus acanthias*) experiencing hypo-osmotic stress ..... 21
- Preston, R.L., Forbes, E.S., Gower, M.L., Marshall, A.V., Chuaypanang, S. Ion and water content of *Fundulus heteroclitus* embryos before and after desiccation stress ..... 22
- Wilbur, B., Claiborne, J.B., Lewis, J.M. Effect of hypoxia on the behavior and metabolism of the longhorn sculpin (*Myoxocephalus octodecemspinosus*) ..... 25

|                                                                                                                              |    |
|------------------------------------------------------------------------------------------------------------------------------|----|
| Hannah, R.M., Smith, A., Yin, V.P. An open-head traumatic brain injury model in adult zebrafish ( <i>Danio rerio</i> ) ..... | 27 |
|------------------------------------------------------------------------------------------------------------------------------|----|

## Molecular Toxicology

|                                                                                                                                                                                                                                          |    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Lionarons, D.A., Boyer, J.L., Cai, S.Y. The apical sodium-dependent bile salt transporter (Asbt) in sea lamprey ( <i>Petromyzon marinus</i> ) transport early evolved 5 $\alpha$ bile alcohols but not modern 5 $\beta$ bile acids ..... | 29 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|

## Cell Biology

|                                                                                                                                                |    |
|------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Rydlizky, K.W., Coffman, J.A. Hypoxic perturbation of <i>nodal</i> -dependent axis specification in <i>Strongylocentrotus purpuratus</i> ..... | 31 |
|------------------------------------------------------------------------------------------------------------------------------------------------|----|

## Ecology

|                                                                                                                                 |    |
|---------------------------------------------------------------------------------------------------------------------------------|----|
| Rublee, P.A., Boyd, V., Williams, A. Similarity of microbial communities in lakes and ponds of Mount Desert Island, Maine ..... | 34 |
|---------------------------------------------------------------------------------------------------------------------------------|----|

|                                                                                                                                                                                                                |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| White, S., Bleicher, S., Peirce, E., Kidder, G., Disney, J. Lobster ( <i>Homarus americanus</i> ) size distribution in relation to proximity to eelgrass ( <i>Zostera marina</i> ) beds in Frenchman Bay ..... | 35 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|

|                                                                                                                                  |    |
|----------------------------------------------------------------------------------------------------------------------------------|----|
| Kidder, G., Rowan, H. Surface currents in Eastern Bay - a dispersal mechanism for eelgrass ( <i>Zostera marina</i> ) seeds ..... | 39 |
|----------------------------------------------------------------------------------------------------------------------------------|----|

|                                                                                                                                                                                                 |    |
